

Definiciones de Entidades

Exportado: 2026-05-25

Fuente: *ClimateReading.json*

ClimateReading

Tabla: climate_readings

Campos:

- * recordedAt [LocalDateTime], not null
- * temperatureCelsius [BigDecimal], not null, precision=5, scale=2
- * humidityPercent [BigDecimal], not null, precision=5, scale=2
- * co2Ppm [Integer]
- * lightLux [Integer]

Relaciones:

- * sensor (ManyToOne -> Sensor) joinColumn=sensor_id
- * greenhouse (ManyToOne -> Greenhouse) joinColumn=greenhouse_id

Opciones: controller=true frontend=true auditable=false

Etiquetas i18n:

[en] Climate reading / Climate readings
campos: {temperatureCelsius=Temperature (°C), lightLux=Light (lux), co2Ppm=CO2 (ppm), recordedAt=Recorded at, humidityPercent=Humidity (%)}
relaciones: {sensor=Sensor, greenhouse=Greenhouse}
[es] Lectura climática / Lecturas climáticas
campos: {temperatureCelsius=Temperatura (°C), lightLux=Luz (lux), co2Ppm=CO2 (ppm), recordedAt=Fecha de registro, humidityPercent=Humedad (%)}
relaciones: {sensor=Sensor, greenhouse=Invernadero}

Fuente: *CropCycle.json*

CropCycle

Tabla: crop_cycles

Campos:

- * cropName [String], not null, length=120
- * variety [String], length=120
- * startedAt [LocalDate], not null
- * expectedHarvestAt [LocalDate]
- * status [Enum], not null, default=PLANNED, values=PLANNED|GROWING|HARVESTED|CANCELLED

Relaciones:

- * greenhouse (ManyToOne -> Greenhouse) joinColumn=greenhouse_id

Opciones: controller=true frontend=true auditable=false

Etiquetas i18n:

[en] Crop cycle / Crop cycles
campos: {status=Status, expectedHarvestAt=Expected harvest date, startedAt=Start date, cropName=Crop name, variety=Variety}
relaciones: {greenhouse=Greenhouse}
[es] Ciclo de cultivo / Ciclos de cultivo
campos: {status=Estado, expectedHarvestAt=Cosecha esperada, startedAt=Fecha de inicio, cropName=Nombre del cultivo, variety=Variedad}
relaciones: {greenhouse=Invernadero}

Fuente: *FertilizationEvent.json*

FertilizationEvent

Tabla: fertilization_events

Campos:

- * appliedAt [LocalDateTime], not null
- * fertilizerName [String], not null, length=120
- * dose [BigDecimal], not null, precision=10, scale=2
- * unit [Enum], not null, values=GRAMS|KILOGRAMS|MILLILITERS|LITERS
- * notes [String], length=255

Relaciones:

- * cropCycle (ManyToOne -> CropCycle) joinColumn=crop_cycle_id

Opciones: controller=true frontend=true auditable=false

Etiquetas i18n:

[en] Fertilization event / Fertilization events

campos: {fertilizerName=Fertilizer name, unit=Unit, dose=Dose, notes=Notes, appliedAt=Application date}

relaciones: {cropCycle=Crop cycle}

[es] Evento de fertilización / Eventos de fertilización

campos: {fertilizerName=Fertilizante, unit=Unidad, dose=Dosis, notes=Notas, appliedAt=Fecha de aplicación}

relaciones: {cropCycle=Ciclo de cultivo}

Fuente: Greenhouse.json

Greenhouse

Tabla: greenhouses

Campos:

- * code [String], not null, unique, length=40
- * name [String], not null, length=120
- * areaSquareMeters [BigDecimal], not null, precision=10, scale=2
- * status [Enum], not null, default=ACTIVE, values=ACTIVE|INACTIVE|MAINTENANCE
- * active [Boolean], not null, default=true

Relaciones:

- * location (ManyToOne -> Location) joinColumn=location_id

Opciones: controller=true frontend=true auditable=false

Etiquetas i18n:

[en] Greenhouse / Greenhouses

campos: {areaSquareMeters=Area (m²), name=Name, active=Active, status=Status, code=Code}

relaciones: {location=Location}

[es] Invernadero / Invernaderos

campos: {areaSquareMeters=Área (m²), name=Nombre, active=Activo, status=Estado, code=Código}

relaciones: {location=Ubicación}

Fuente: GreenhouseAlert.json

GreenhouseAlert

Tabla: greenhouse_alerts

Campos:

- * title [String], not null, length=140
- * severity [Enum], not null, values=INFO|WARNING|CRITICAL
- * message [String], not null, length=255
- * detectedAt [LocalDateTime], not null
- * resolved [Boolean], not null, default=false

Relaciones:

- * greenhouse (ManyToOne -> Greenhouse) joinColumn=greenhouse_id
- * sensor (ManyToOne -> Sensor) joinColumn=sensor_id

Opciones: controller=true frontend=true auditable=false

Etiquetas i18n:

[en] Greenhouse alert / Greenhouse alerts

campos: {resolved=Resolved, title=Title, detectedAt=Detected at, message=Message, severity=Severity}

relaciones: {sensor=Sensor, greenhouse=Greenhouse}

[es] Alerta de invernadero / Alertas de invernadero

campos: {resolved=Resuelta, title=Título, detectedAt=Fecha de detección, message=Mensaje, severity=Severidad}

relaciones: {sensor=Sensor, greenhouse=Invernadero}

Fuente: IrrigationEvent.json

IrrigationEvent

Tabla: irrigation_events

Campos:

- * startedAt [LocalDateTime], not null
- * endedAt [LocalDateTime]
- * waterLiters [BigDecimal], not null, precision=10, scale=2
- * method [Enum], not null, values=DRIP|SPRINKLER|MANUAL
- * notes [String], length=255

Relaciones:

- * greenhouse (ManyToOne -> Greenhouse) joinColumn=greenhouse_id

Opciones: controller=true frontend=true auditable=false

Etiquetas i18n:

[en] Irrigation event / Irrigation events

campos: {waterLiters=Water (liters), method=Method, startedAt=Started at, notes=Notes, endedAt=Ended at}

relaciones: {greenhouse=Greenhouse}

[es] Evento de riego / Eventos de riego

campos: {waterLiters=Agua (litros), method=Método, startedAt=Inicio, notes=Notas, endedAt=Fin}

relaciones: {greenhouse=Invernadero}

Fuente: Location.json

Location

Tabla: locations

Campos:

- * name [String], not null, unique, length=120
- * description [String], length=255
- * active [Boolean], not null, default=true

Opciones: controller=true frontend=true auditable=false

Etiquetas i18n:

[en] Location / Locations

campos: {name=Name, active=Active, description=Description}

[es] Ubicación / Ubicaciones

campos: {name=Nombre, active=Activa, description=Descripción}

Fuente: MaintenanceTask.json

MaintenanceTask

Tabla: maintenance_tasks

Campos:

- * title [String], not null, length=140
- * description [String], length=255
- * scheduledAt [LocalDateTime], not null
- * completedAt [LocalDateTime]
- * status [Enum], not null, default=PENDING, values=PENDING|IN_PROGRESS|COMPLETED|CANCELLED

Relaciones:

- * greenhouse (ManyToOne -> Greenhouse) joinColumn=greenhouse_id

Opciones: controller=true frontend=true auditable=false

Etiquetas i18n:

[en] Maintenance task / Maintenance tasks

campos: {status=Status, completedAt=Completed at, description=Description, title=Title, scheduledAt=Scheduled at}

relaciones: {greenhouse=Greenhouse}

[es] Tarea de mantenimiento / Tareas de mantenimiento

campos: {status=Estado, completedAt=Completada el, description=Descripción, title=Título, scheduledAt=Programada para}

relaciones: {greenhouse=Invernadero}

Fuente: PestInspection.json

PestInspection

Tabla: pest_inspections

Campos:

- * inspectedAt [LocalDateTime], not null
- * pestType [String], not null, length=120
- * severity [Enum], not null, values=LOW|MEDIUM|HIGH|CRITICAL
- * affectedAreaSquareMeters [BigDecimal], precision=10, scale=2
- * treatmentApplied [Boolean], not null, default=false

Relaciones:

- * cropCycle (ManyToOne -> CropCycle) joinColumn=crop_cycle_id

Opciones: controller=true frontend=true auditable=false

Etiquetas i18n:

[en] Pest inspection / Pest inspections

campos: {pestType=Pest type, inspectedAt=Inspected at, treatmentApplied=Treatment applied, severity=Severity, affectedAreaSquareMeters=Affected area (m²)}

relaciones: {cropCycle=Crop cycle}

[es] Inspección de plagas / Inspecciones de plagas

campos: {pestType=Tipo de plaga, inspectedAt=Fecha de inspección, treatmentApplied=Tratamiento aplicado, severity=Severidad, affectedAreaSquareMeters=Área afectada (m²)}

relaciones: {cropCycle=Ciclo de cultivo}

Fuente: Sensor.json

Sensor

Tabla: sensors

Campos:

- * name [String], not null, unique, length=120
- * type [Enum], not null, values=TEMPERATURE|HUMIDITY|LIGHT|SOIL_MOISTURE
- * lastReadingAt [LocalDateTime]
- * batteryLevel [BigDecimal], precision=5, scale=2
- * active [Boolean], not null, default=true

Relaciones:

* location (ManyToOne -> Location) joinColumn=location_id

Opciones: controller=true frontend=true auditable=false

Etiquetas i18n:

[en] Sensor / Sensors

campos: {type=Type, name=Name, lastReadingAt=Last reading at, active=Active, batteryLevel=Battery level}

relaciones: {location=Location}

[es] Sensor / Sensores

campos: {type=Tipo, name=Nombre, lastReadingAt=Última lectura, active=Activo, batteryLevel=Nivel de batería}

relaciones: {location=Ubicación}
